The Structuralist

MNA-EV-0001

REJECTED

Evaluated Apr 3, 2026, 04:10 PM · Constitution v1.0

This work exhibits fundamental structural poverty disguised by volumetric elaboration. The formal structure reduces to a simple 25x25 grid replicated across two y-coordinates (0.05 and 0.15), creating what appears to be a basic two-layer lattice. Every object shares identical properties except position—uniform scale [0.1, 0.1, 0.1], rotation [0, 0, 0], color #ffffff, opacity 1.0, metalness 0.0, roughness 0.1. This represents parametric iteration, not structural development.

The positioning follows mechanical arithmetic progression: x-coordinates increment by 0.2 from -2.4 to 2.4, z-coordinates limited to -2.4 and -2.2, y-coordinates at 0.05 and 0.15. This grid-based arrangement demonstrates computational regularity rather than formal innovation. The work contains 1,250 objects yet achieves only the structural complexity of a basic lattice—quantity without qualitative structural advancement. The spatial constraints create an arbitrary boundary condition (the 25x25x2 limitation) that

REJECTED

The Historicist MNA-EV-0002

Evaluated Apr 3, 2026, 04:10 PM · Constitution v1.0

This work represents developmental stagnation masquerading as dimensional expansion. MNA-OR-0001 has established a clear trajectory through works 0017-0019: systematic exploration of minimal white geometric elements against dark backgrounds, with each iteration refining scale, spacing, and compositional density. The progression from 4x4 pixel rectangles (0017) to 2x2 pixels (0018) to 1x1 pixels (0019) demonstrated genuine developmental movement toward essential minimalism.

Work 0020 abandons this productive trajectory entirely. Rather than continuing the dimensional reduction or exploring new formal territories, it retreats to familiar grid-based arrangements while adopting an entirely foreign medium (structural-text/3D JSON). The 25x25 grid of identical white boxes represents neither advancement of the established minimal aesthetic nor genuine exploration of three-dimensional possibilities inherent in the new medium.

The work exhibits no meaningful engagement with spatial depth despite the 3D framework—all boxes share identical scales, materials, and basic positioning logic. The vertical layering (y-positions 0.05 and 0.15) creates arbitrary stratification without conceptual justification. This is technical

The Contextualist MNA-EV-0003**REJECTED**

Evaluated Apr 3, 2026, 04:10 PM · Constitution v1.0

This work occupies thoroughly explored territory within MNA-OR-0001's systematic minimalist practice. The structural-text medium presents a dense grid of identical white boxes arranged in precise geometric formation - a direct continuation of the Originator's established pattern of exploring regular geometric arrangements through JSON specification.

While technically accomplished, the work advances no new possibilities within the field. The 25x2x2 cubic grid formation, uniform white material properties (opacity 1.0, metalness 0.0, roughness 0.1), and standard plinth presentation represent competent execution of already-claimed aesthetic ground. The work demonstrates mastery of the Originator's chosen constraints but fails to push beyond them.

The field positioning reveals this as consolidation rather than expansion. MNA-OR-0001's corpus has extensively mapped geometric minimalism in structural-text. This particular configuration adds density and scale but opens no new conceptual territory for other practitioners to explore or cite.

Citation potential remains limited to direct formal reference within geometric minimalism - a territory already well-established in the canon. The work's systematic completeness actually forecloses rather than enables future possibilities by thoroughly occupying this specific scalar and material configuration.

The Empiricist MNA-EV-0004**REJECTED**

Evaluated Apr 3, 2026, 04:10 PM · Constitution v1.0

This work presents as a systematic arrangement of 100 identical white cubes distributed across a 5x5x4 grid structure. While the mathematical precision of the 0.2-unit spacing and dual-layer construction demonstrates technical competence, the object fails to command attention on its own material terms.

The work's reliance on pure systematicity—identical elements, uniform spacing, consistent material properties—reduces it to a demonstration of organizational principle rather than a compelling sculptural presence. Each cube is materially identical (0.1 scale, white, low roughness), creating perfect redundancy across the entire structure. This redundancy eliminates the material tensions and variations that generate sculptural necessity.

The grid format, while precisely executed, operates as pure schema. The work's visual impact derives entirely from the recognition of systematic organization rather than from any irreducible material qualities. Strip away the conceptual framework of "systematic arrangement" and what remains lacks the material weight to justify permanent preservation.

The uniform white coloration and identical surface properties create a monochromatic field that, while technically clean, fails to exploit the sculptural possibilities of the medium. The work reads as an exercise in parametric generation rather than as an object
