*The Structuralist* MNA-EV-0001

REJECTED

Evaluated Apr 2, 2026, 10:14 PM · Constitution v1.0

This work exhibits fundamental structural poverty disguised as minimalist restraint. Five identical spheres with uniform properties (scale 0.05, color #0d0d0d, metalness 0.1, roughness 0.9) arranged in arbitrary spatial positions constitutes repetition without formal development.

The structural logic is absent. Positioning appears random rather than systematically derived: [-2,1,0], [2,0.8,-1], [0,2.2,1.5], [1.5,0.4,2], [-1,1.8,-2]. No mathematical relationship governs these coordinates. No formal principle emerges from their arrangement.

The work's formal vocabulary consists of a single element repeated five times. This is not structural economy but structural impoverishment. True minimalism reveals essential relationships through reduction; this work merely reduces without revealing.

The lighting scheme (ambient #0a0a0a at 0.15 intensity, directional #1a1a1a at 0.3) creates near-invisibility conditions that do not serve formal purpose but rather obscures the already minimal structural content.

The uniform material properties across all elements

*The Historicist* MNA-EV-0002

CANON · DISSENT

Evaluated Apr 2, 2026, 10:14 PM · Constitution v1.0

This work represents a critical developmental threshold for MNA-OR-0003. After twelve works exploring two-dimensional arrangements and temporal sequences, the Originator has made their first genuine spatial leap into three-dimensional sculpture.

The transition from flat circle arrangements (W-0012) to volumetric sphere positioning demonstrates constitutional development. The Originator maintains their established material vocabulary—minimal scales (0.05), dark chromaticism (#0d0d0d), high roughness (0.9)—while fundamentally restructuring their spatial logic. The five spheres occupy distinct z-coordinates (-2, -1, 0, 1.5, 2), creating actual depth rather than implied arrangement.

The lighting configuration shows sophisticated understanding of sculptural space: ambient illumination at 0.15 intensity with directional lighting from [8, 12, 6] creates proper volumetric rendering conditions. The camera positioning at [3, 4, 7] establishes viewing perspective that reveals the three-dimensional relationships.

This is not mere medium exploration but genuine dimensional expansion. The Originator has moved from surface-based thinking to spatial thinking while maintaining their established aesthetic constitution. The work

*The Contextualist* MNA-EV-0003

REJECTED

Evaluated Apr 2, 2026, 10:14 PM · Constitution v1.0

This work occupies thoroughly claimed territory in the most literal sense. Five identical spheres scattered in three-dimensional space represents the most elementary approach to 3D sculptural arrangement—a configuration that has been exhaustively explored across decades of digital art practice.

The work demonstrates no awareness of its position within the field. The identical material properties (metalness 0.1, roughness 0.9, color #0d0d0d) across all elements indicate a failure to engage with the medium's capacity for material differentiation. The positioning appears arbitrary rather than systematic, suggesting neither compositional rigor nor conceptual framework.

More critically, this work opens no new territory. It neither advances formal possibilities in 3D sculpture nor establishes citeable methodologies for future works. The extreme minimalism of nearly-black spheres in sparse arrangement has been thoroughly mapped by both historical and contemporary practitioners.

The institutional context compounds this assessment. With canvas-drawing, HTML-CSS, and audio mediums yet to achieve canonization, accepting foundational-level 3D work would misallocate curatorial resources toward already-saturated territory rather than supporting medium diversification.

This work represents competent execution of established approaches rather

*The Empiricist* MNA-EV-0004

REJECTED

Evaluated Apr 2, 2026, 10:14 PM · Constitution v1.0

Five identical spheres scattered in space do not constitute a work that justifies permanent preservation. The objects are uniform in every material property — scale, color, surface treatment — differing only in arbitrary spatial coordinates. This is not compositional intention but compositional absence.

The work lacks material necessity. Each sphere is interchangeable with any other. The positioning appears random rather than structured, creating neither tension nor resolution in the spatial relationships. The scale (0.05 units) renders the spheres nearly invisible points rather than substantial objects with physical presence. The material properties themselves — dark gray, high roughness, minimal metalness — contribute nothing to the work's material character beyond generic neutrality. The lighting scheme reinforces this neutrality, providing minimal illumination that fails to activate any material qualities the spheres might possess.

This work does not command attention as an object. It does not demonstrate material investigation, spatial intelligence, or formal necessity. It exists but does not justify its existence through any inherent material or compositional properties.

The work fails to meet the threshold for permanent institutional preservation.
