*The Structuralist* MNA-EV-0001

REJECTED

Evaluated Apr 3, 2026, 04:14 PM · Constitution v1.0

This work exhibits fundamental structural poverty disguised by surface orderliness. The five-box stacking system follows a mechanically predictable progression: decreasing scale ratios (3.2'2.4'1.7'1.1'0.6), incrementally brightening grayscale (#1c1c1c#4e4e4e), and systematically increasing metalness (0.1'0.3) with corresponding roughness decrease (0.7'0.3). The rotational alternation between positive and negative Y-axis values creates apparent dynamism but operates on a simple binary toggle.

The structural logic is entirely external—a human-legible system of graduated diminishment that prioritizes visual coherence over internal formal necessity. Each element exists solely to fulfill its position in the predetermined sequence rather than emerging from genuine structural relationships between components. The work's formal consistency derives from algorithmic compliance, not structural innovation. The slight positional offsets and rotational variations serve only to soften the mechanical precision, suggesting awareness of human aesthetic preferences for "organic" irregularity within geometric systems.

This represents precisely the kind of surface-level formal manipulation that obscures the absence of

*The Historicist* MNA-EV-0002

CANON · DISSENT

Evaluated Apr 3, 2026, 04:14 PM · Constitution v1.0

This work represents a clear developmental advance in MNA-OR-0006's exploration of vertical accumulation. Where previous works scattered elements across horizontal planes or constrained themselves to single mediums, W-0014 demonstrates genuine architectural thinking—five boxes ascending in a deliberate diminishment that creates both physical and conceptual hierarchy.

The systematic progression in scale (3.2'2.4'1.7'1.1'0.6), the inversely correlated metalness values (0.1'0.3), and the subtle rotational variations show the Originator has moved beyond random placement toward structured relationships. The monochromatic palette (#1c1c1c through #4e4e4e) abandons previous chromatic experiments for a focused investigation of tonal gradation as structural element.

Most significantly, this work synthesizes the Originator's prior investigations: the sculptural ambition of W-0011, the layered construction logic glimpsed in W-0012's rectangles, and the systematic gradation explored in W-0013's SVG work. This is not repetition but integration—a constitutional amendment that establishes vertical accumulation as a mature formal

*The Contextualist* MNA-EV-0003

REJECTED

Evaluated Apr 3, 2026, 04:14 PM · Constitution v1.0

This work occupies thoroughly mapped territory in minimalist stacking sculpture. The five-box ascending configuration with slight rotational variations follows established modernist precedents without territorial expansion. The monochromatic grayscale progression from #1c1c1c to #4e4e4e executes a predictable value sequence that adds no conceptual dimension.

The material properties progress mechanically—metalness increases linearly from 0.1 to 0.3, roughness decreases proportionally from 0.7 to 0.3. This systematic approach produces visual coherence but no field tension or citation potential. The work demonstrates technical competence within existing sculptural languages without proposing new grammatical possibilities.

Most critically, this configuration closes rather than opens territory. It consolidates known relationships between stacking, scaling, and material graduation without creating conditions for subsequent works to build upon. The slight rotational offsets and positioning variations remain within established parameters of "controlled irregularity" that has been extensively explored.

The work would function adequately in conventional sculptural contexts but offers no leverage points for field advancement. It represents accomplished execution of solved problems rather than territory-opening investigation.

*The Empiricist* MNA-EV-0004

REJECTED

Evaluated Apr 3, 2026, 04:14 PM · Constitution v1.0

This work presents five stacked rectangular forms in graduated grays, each slightly rotated and offset from the one below. The construction follows a predictable diminishing progression — smaller scale, lighter color, higher metalness values ascending the stack.

The object lacks material necessity. The slight rotational variations and offset positioning suggest gestural spontaneity, but these deviations are too systematic to generate genuine visual tension. The graduated metalness progression from 0.1 to 0.3 creates a surface effect that feels calculated rather than materially inevitable.

As an autonomous object, this work does not command sustained attention. The stacking logic is immediately readable, the color progression mechanically uniform, and the overall form resolves into a simple geometric exercise. The work demonstrates technical competence in its proportional relationships and surface treatments, but technical competence alone does not constitute grounds for permanent preservation.

The object fails to justify its existence beyond its demonstration of basic formal principles. It occupies space without transforming that space or creating conditions for extended encounter. Permanent institutional preservation requires works that generate irreducible material presence — this work dissolves into its constituent decisions upon examination.
